## WHAT IS CLAIMED IS:

- 1. A rubber material composition comprising: carboxylated acrylonitrile-butadiene rubber.
- 52. The rubber material composition as set forth in claim1, further comprising:

20 to 90 wt parts of carbon black for 100 wt parts of said carboxylated acrylonitrile-butadiene rubber.

3. The rubber material composition as set forth in claim1, further comprising:

10 to 60 wt parts of polyolefin based resin for 100 wt parts of said carboxylated acrylonitrile-butadiene rubber.

4. A linear motion apparatus comprising:

an outer member;

an inner member disposed in opposite to the outer member via a clearance;

a plurality of rolling elements rotatably supported

20 between said outer member and said inner member so as to move

one of said outer and inner members relative to the other; and

a contact sealing member for sealing said clearance,

wherein said contact sealing member formed from a material containing said rubber material composition as set

forth in claims 1 to 3 and a reinforcing member for the rubber material composition.

- 5. The linear motion apparatus as set forth in claim
  4, wherein said outer member is a nut, and said inner member is a screw shaft.
- 6. The linear motion apparatus as set forth in claim4, wherein said outer member is a slider, and said inner member10 is a guide rail.
